E-LEARNING

**E-learning saved the academic year amidst the COVID-19
pandemic**

H RODKIN

10 November 2020

Brief description of Innovation/Technology

E-LEARNING

- Amidst the COVID-19 pandemic, the Elsenburg Agricultural Training Institute established a Moodle Platform to ensure continuation of studies for registered students. This initiative was done in collaboration with Stellenbosch University.

Why was this innovation/technology needed/developed?

Elsenburg Agricultural Training Institute offers the following training programmes to interested students:

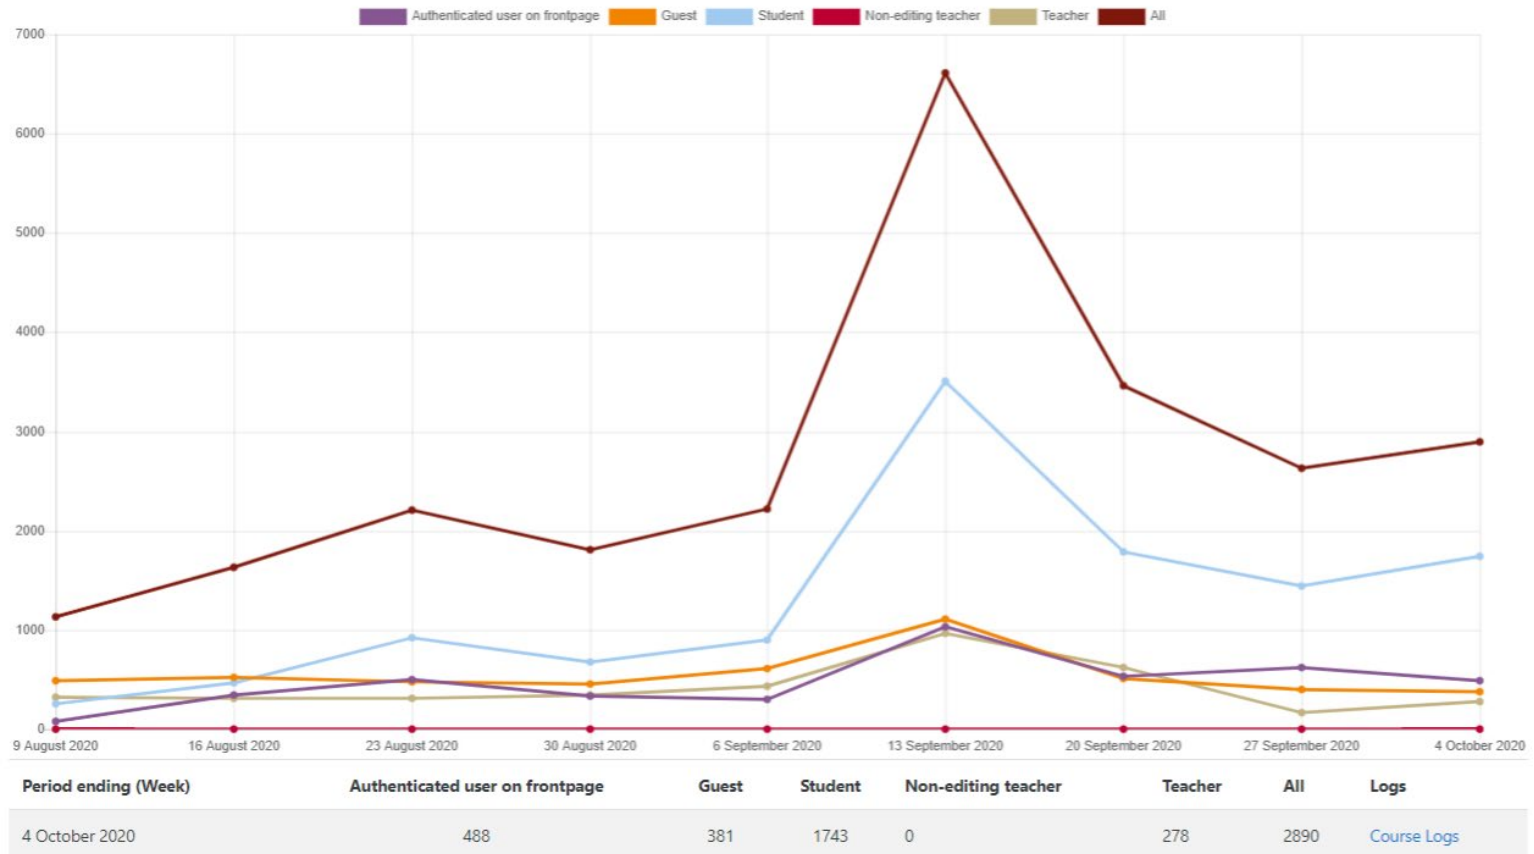

- B Agric Degree (in collaboration with Stellenbosch University)
- Diploma in Agriculture
- Learnership Programme
- Non-formal short courses

The agricultural education environment requires a balanced knowledge and understanding of theory and practical, to ensure the graduate is equipped for what awaits in the workplace. Elsenburg Agricultural Training Institute (EATI) offers both practical and theory to all students.

During the COVID-19 pandemic, EATI was in urgent need for an e-learning platform where students could have access to the academic content of the various modules of the curriculum, interact with lecturers and submit assignments, in order to save the academic year.

Activity on the platform
